

VDCT

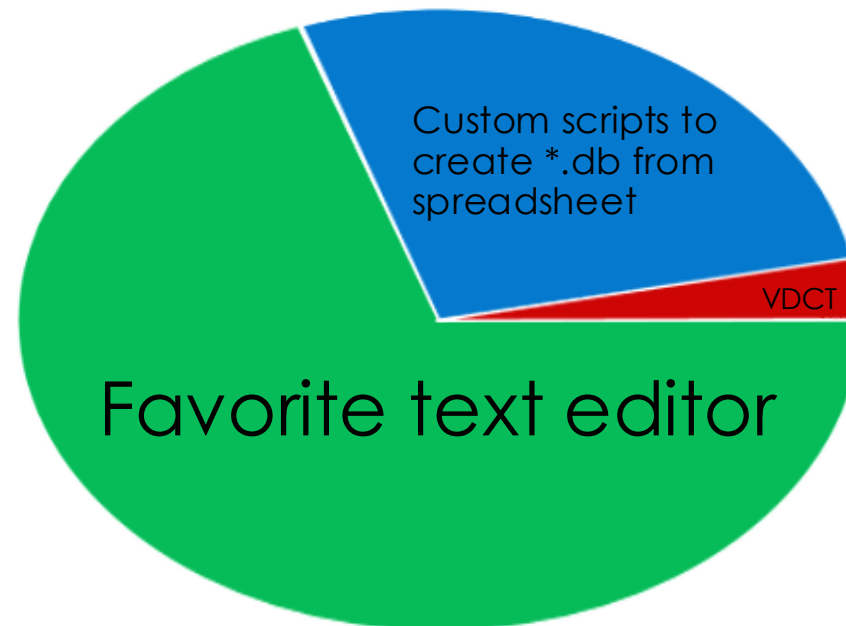

Kay Kasemir

July 2026

ORNL is managed by UT-Battelle, LLC for the US Department of Energy

Creating *.db files

- Is there a graphical tool to help with this?
Yes, VDCT!
- What do people actually use?

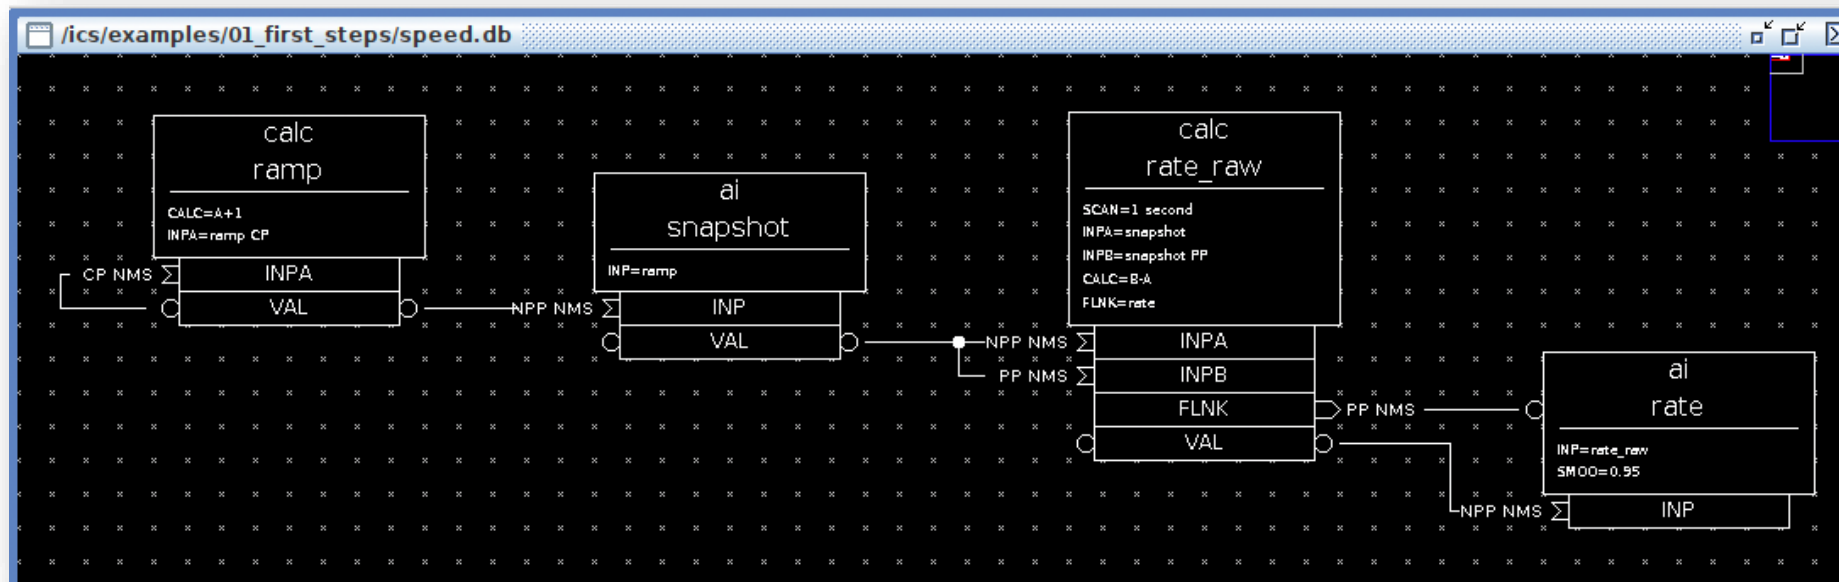

*Note:
Not based on any reputable survey beyond emails
“Just noticed that VDCT won't start, and it look like that's been the case for 3 years”*

Database in VDCT

```
cd /ics/examples/01_first_steps
```

```
vdct speed.db
```

- Move the records around until you have a “neat” layout
 - All connections (‘wires’) must be detangled
 - Data should roughly ‘flow’ in one direction, for example left-to-right

Save, then open file in text editor.

May switch between vdct ↔ text editor!
